| Description:   | In this course, students will be provided with appropriate and sustainable focus on clean water access infrastructure planning in developing countries. The clean water problem will be examined from a multidisciplinary perspective. Students will be informed by examples of areas where access to clean water is limited, such as Asia, Africa and Latin America. At the end of the course, students will become competent in designing simple, sustainable water supply systems in the developing countries that suffer from water access difficulties. |
